DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Att. McGinn on May 11, 2005.

The application has been amended as follows:

In the specification,

page 3, line 30, replace "(HST)" with – HST --;

page 8, line 31, after "amplifier", replace "2415 (2425, ...)" with -- 2417 (2427, ...) --.

Reasons for allowance

The following is an examiner's statement of reasons for allowance:

The present invention is drawn to a data line driver circuit for driving a plurality of data lines in a display apparatus utilizing a shift register circuit, a plurality of data register circuits, a plurality of digital/analog converters and a plurality of drivers. Each of the drivers comprising a voltage-follower-type operational amplifier, a transient state detecting and a switch circuit recited in claims 1-22. None of the prior art disclosed or suggested to show the particular structure and/or the particular operation recited in these claims namely: "the transient state detecting circuit for detecting a transient stage in said current input data to generate a first pulse signal when said current input data is increased and generate a second pulse signal when the

current input data is decreased” and “the switch circuit, connected between said transient state detecting circuit and said voltage-follower-type operational amplifier, for substantially increasing corresponding load currents flowing through said voltage-follower-type operational amplifier in accordance with said first and second pulse signals” in combination with “the voltage-follower-type operational amplifier” as recited in claim 1; “the transient state detecting circuit ... when the respective one of said current input data is decreased” and “the switch circuit, connected between said transient state detecting circuit and said voltage-follower-type operational amplifier, for substantially increasing corresponding load currents flowing through said voltage-follower-type operational amplifier in accordance with said first and second pulse signals” in combination with “the voltage-follower-type operational amplifier” as recited in claim 12.

The prior art reference submitted by the applicant on IDS form received on 4/15/04 was reviewed and considered. This reference appears to be the best references with respect to the claimed invention. However, as noted above, the combination of “the voltage-follower-type operational amplifier”, “the transient state detecting circuit” and “the switch circuit” is not disclosed. Therefore, the claims are patentably distinct over this prior art reference of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
